Healing of the mind, body, and the  
site guided the design for gardens  
leading to a variety of spaces where  
patients, their families, and hospital  
staff can connect with the  
distinctive southern Arizona  
landscape. Elements include  
outdoor terraces, intimate gardens,

out the facility, the photovoltaic collectors provide all of the buildings electricity. 2. Amini tanks keep the exterior spaces cooler and mitigate the "heat island" effect. 3. Covered nature of wetland plants. The plants remove nitrogen and reduce the Biological Oxygen Demand. Additional wetland plants are suspended in an Aerobic Lagoon. In a synthetic, initial populations that further scrub the water. 4. Green Roof. This living roof system even drying. Made from reclaimed copper lumber, this wall system allows the building to "Breathe" during daylight. These measures: the sunlight available for the plants and permeable serves two purposes. First, it works to locate sunlight onto the ceiling of the also, it shades the lower portion of the window wall. From direct solar exposure during the here are the PV system inverters, and equipment for the Eco Machine™ and carwater expose the inner workings of the building systems. 5. Green Pavilion. Whenever possible, walking are exposed. With extra care given to making these elements attractive, lower light. 11. Woodlands. Restoration. Future projects will restore the woodlands surrounding lot.

does sustainable mean natural?

when is natural not sustainable?

natural not sustainable
